PROFESSIONAL SUMMARY

Fullstack .NET Software Engineer with 4+ years building supply chain and distribution systems at Pupuk Indonesia, from backend APIs (C#, ASP.NET Core, EF Core, SQL Server) to data dashboards on Snowflake. Delivered a geofencing anti-fraud system for national delivery tracking and cut Google Maps API costs by 84%. Adds a QA background in API test automation and secure coding. Based in Jakarta (UTC+7), open to remote roles.

CORE TECHNICAL SKILLS

C# · .NET · ASP.NET Core	REST API · JWT · RBAC	Geofencing · QR Tracking
EF Core · Clean Architecture	SQL Server · Snowflake	IIS Deployment · Dashboards

TOOLS & TESTING

Visual Studio	Postman	Selenium	Appium	JMeter
Git	Qase.io	Katalon	Java	Grafana

PROFESSIONAL EXPERIENCE

Pupuk Indonesia

Fullstack .NET Software Engineer (Supply Chain Digitalization) **Sep 2022 - Present**

- Co-designed the business process with the team and built iDelivery API (.NET 10, Clean Architecture, EF Core, SQL Server) for subsidized-fertilizer pickup and delivery tracking, delivered on schedule within the one-month deadline, with role-based JWT access and PoS & Warehouse Inventory integration.
- Within 3 weeks of go-live, iDelivery tracked 300+ road shipments totaling 2,500+ tons of fertilizer; supported the field rollout in Bangka.
- Engineered a geofencing system with dynamic-radius scanning for delivery tracking, mitigating operational fraud and improving data accuracy nationwide.
- Reduced Google Maps API costs by 84% (from ~Rp10 million to ~Rp1.6 million per month) by re-architecting the integration and optimizing code.
- Engineered backend APIs for the "Dashboard Pemasaran" management dashboard, with Role-Based Access Control (RBAC) for strict data security and dynamic user permissions.
- Built supply chain monitoring dashboards (fertilizer stock across plants, distributors, and kiosks; truck delivery progress) to 92% completion in one month while covering four roles: backend, frontend, data analysis, and QA.
- Wrote SQL Server queries for QR tracking across four distribution tiers and Snowflake views for sales dashboards (RKAP vs. actuals, stock position, YoY growth).
- Developed "QR Untung", a gamified QR-scanning app that incentivizes farmers to submit agricultural data, generating market intelligence on distribution and end-user sales.

Software Quality Assurance Initiative **Dec 2023 - Feb 2025**

- Led automated API testing with Postman and authored bug and test reports in Qase.io across multiple applications, improving defect visibility and pre-release stability.
- Mentored 2 QA interns on testing practices and troubleshooting.

INTERNSHIPS

Mitra Integrasi Informatika, Jakarta **Feb 2022 - Jul 2022**
Quality Assurance Intern

- Executed manual and comprehensive regression testing procedures to identify defects and ensure software reliability.
- Innovated and enhanced test report formats.

Telkom Indonesia, Jakarta **Jul 2021 – Nov 2021**
Junior Data Analyst

- Extracted, processed, and visualized database metrics to streamline management decision-making.
- Enhanced data processing techniques using SQL Server & Grafana, significantly improving report accuracy and generation speed.

EDUCATION

Telkom University, Bandung **Feb 2018 - Dec 2022**

- Grade 3.89/4.00
- Thesis Research Speaker (Credential ID 393/AKD6/IF-DEK/2022)
  - Topic : Implementing Continuous Code Quality for Code Quality Development in the Scrum Team | [View Research Document]
- Laboratory & Practicum Assistant at University Lab
- Lecturer Assistant related to software construction methods
